

分母の違う 分数の引き算

②

月 日 曜日

名前

次の計算をしましょう。答えは約分しましょう。

$$(1) \quad \frac{9}{12} - \frac{3}{3} = \frac{9}{12} - \frac{8}{12} = \frac{1}{12}$$

$$(11) \quad \frac{3}{4} - \frac{3}{7} = \frac{21}{28} - \frac{12}{28} = \frac{9}{28}$$

$$(2) \quad \frac{11}{16} - \frac{1}{4} = \frac{11}{16} - \frac{4}{16} = \frac{7}{16}$$

$$(12) \quad \frac{5}{7} - \frac{2}{5} = \frac{25}{35} - \frac{14}{35} = \frac{11}{35}$$

$$(3) \quad \frac{5}{9} - \frac{1}{4} = \frac{20}{36} - \frac{9}{36} = \frac{11}{36}$$

$$(13) \quad \frac{3}{4} - \frac{3}{5} = \frac{15}{20} - \frac{12}{20} = \frac{3}{20}$$

$$(4) \quad \frac{8}{13} - \frac{1}{2} = \frac{16}{26} - \frac{13}{26} = \frac{3}{26}$$

$$(14) \quad \frac{1}{2} - \frac{2}{7} = \frac{7}{14} - \frac{4}{14} = \frac{3}{14}$$

$$(5) \quad \frac{4}{5} - \frac{1}{6} = \frac{24}{30} - \frac{5}{30} = \frac{19}{30}$$

$$(15) \quad \frac{1}{6} - \frac{1}{9} = \frac{3}{18} - \frac{2}{18} = \frac{1}{18}$$

$$(6) \quad \frac{3}{5} - \frac{7}{15} = \frac{9}{15} - \frac{7}{15} = \frac{2}{15}$$

$$(16) \quad \frac{3}{8} - \frac{4}{12} = \frac{9}{24} - \frac{8}{24} = \frac{1}{24}$$

$$(7) \quad \frac{5}{12} - \frac{2}{9} = \frac{15}{36} - \frac{8}{36} = \frac{7}{36}$$

$$(17) \quad \frac{8}{15} - \frac{1}{6} = \frac{16}{30} - \frac{5}{30} = \frac{11}{30}$$

$$(8) \quad \frac{2}{3} - \frac{4}{7} = \frac{14}{21} - \frac{12}{21} = \frac{2}{21}$$

$$(18) \quad \frac{9}{12} - \frac{2}{3} = \frac{9}{12} - \frac{8}{12} = \frac{1}{12}$$

$$(9) \quad \frac{2}{3} - \frac{1}{12} = \frac{8}{12} - \frac{1}{12} = \frac{7}{12}$$

$$(19) \quad \frac{6}{7} - \frac{3}{8} = \frac{48}{56} - \frac{21}{56} = \frac{27}{56}$$

$$(10) \quad \frac{4}{5} - \frac{1}{2} = \frac{8}{10} - \frac{5}{10} = \frac{3}{10}$$

$$(20) \quad \frac{4}{5} - \frac{3}{7} = \frac{28}{35} - \frac{15}{35} = \frac{13}{35}$$
