

分母の違う 分数の引き算

③

月 日 曜日

名前

次の計算をしましょう。答えは約分しましょう。

$$(1) \quad \frac{7}{8} - \frac{1}{3} = \frac{21}{24} - \frac{8}{24} = \frac{13}{24}$$

$$(11) \quad \frac{15}{16} - \frac{5}{6} = \frac{45}{48} - \frac{40}{48} = \frac{5}{48}$$

$$(2) \quad \frac{6}{7} - \frac{4}{9} = \frac{54}{63} - \frac{28}{63} = \frac{26}{63}$$

$$(12) \quad \frac{7}{8} - \frac{7}{10} = \frac{35}{40} - \frac{34}{40} = \frac{1}{40}$$

$$(3) \quad \frac{1}{3} - \frac{4}{13} = \frac{13}{39} - \frac{12}{39} = \frac{1}{39}$$

$$(13) \quad \frac{3}{5} - \frac{7}{13} = \frac{39}{65} - \frac{35}{65} = \frac{4}{65}$$

$$(4) \quad \frac{1}{4} - \frac{3}{14} = \frac{7}{28} - \frac{6}{28} = \frac{1}{28}$$

$$(14) \quad \frac{7}{8} - \frac{17}{20} = \frac{35}{40} - \frac{34}{40} = \frac{1}{40}$$

$$(5) \quad \frac{1}{2} - \frac{7}{15} = \frac{15}{30} - \frac{14}{30} = \frac{1}{30}$$

$$(15) \quad \frac{13}{20} - \frac{8}{15} = \frac{39}{60} - \frac{32}{60} = \frac{7}{60}$$

$$(6) \quad \frac{11}{12} - \frac{7}{9} = \frac{33}{36} - \frac{28}{36} = \frac{5}{36}$$

$$(16) \quad \frac{2}{3} - \frac{29}{45} = \frac{30}{45} - \frac{29}{45} = \frac{1}{45}$$

$$(7) \quad \frac{2}{3} - \frac{9}{16} = \frac{32}{48} - \frac{27}{48} = \frac{5}{48}$$

$$(17) \quad \frac{5}{14} - \frac{2}{6} = \frac{15}{42} - \frac{14}{42} = \frac{1}{42}$$

$$(8) \quad \frac{1}{4} - \frac{1}{7} = \frac{7}{28} - \frac{4}{28} = \frac{3}{28}$$

$$(18) \quad \frac{7}{10} - \frac{5}{8} = \frac{28}{40} - \frac{25}{40} = \frac{3}{40}$$

$$(9) \quad \frac{8}{11} - \frac{3}{5} = \frac{40}{55} - \frac{33}{55} = \frac{7}{55}$$

$$(19) \quad \frac{5}{6} - \frac{12}{15} = \frac{25}{30} - \frac{24}{30} = \frac{1}{30}$$

$$(10) \quad \frac{13}{18} - \frac{1}{4} = \frac{26}{36} - \frac{9}{36} = \frac{17}{36}$$

$$(20) \quad \frac{5}{12} - \frac{5}{18} = \frac{15}{36} - \frac{10}{36} = \frac{5}{36}$$
