次の計算をしましょう。答えは約分しましょう。

$$(1) \frac{1}{2} + \frac{2}{3} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1\frac{1}{6}$$

$$(11) \frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = \frac{4}{4} = 1$$

$$(2) \frac{5}{8} + \frac{1}{2} = \frac{5}{8} + \frac{4}{8} = \frac{9}{8} = 1\frac{1}{8}$$

$$(12) \frac{4}{3} + \frac{6}{9} = \frac{12}{9} + \frac{6}{9} = \frac{18}{9} = 2$$

$$(3) \frac{4}{9} + \frac{2}{3} = \frac{4}{9} + \frac{6}{9} = \frac{10}{9} = 1\frac{1}{9}$$

$$(13) \frac{3}{5} + \frac{6}{15} = \frac{6}{15} + \frac{6}{15} = \frac{12}{15} = \frac{4}{5}$$

$$(4) \frac{1}{2} + \frac{3}{4} = \frac{2}{4} + \frac{3}{4} = \frac{5}{4} = 1\frac{1}{4}$$

$$(14) \frac{3}{7} + \frac{8}{14} = \frac{6}{14} + \frac{8}{14} = \frac{14}{14} = 1$$

$$(5) \frac{2}{3} + \frac{3}{4} = \frac{8}{12} + \frac{9}{12} = \frac{17}{12} = 1\frac{5}{12}$$

$$(15) \frac{4}{5} + \frac{18}{15} = \frac{12}{15} + \frac{18}{15} = \frac{30}{15} = 2$$

$$(6) \frac{3}{4} + \frac{5}{8} = \frac{6}{8} + \frac{5}{8} = \frac{11}{8} = 1\frac{3}{8}$$

$$(16) \frac{4}{3} + \frac{1}{2} = \frac{8}{6} + \frac{3}{6} = \frac{11}{6} = 1\frac{5}{6}$$

$$(7) \frac{6}{7} + \frac{1}{2} = \frac{12}{14} + \frac{7}{14} = \frac{19}{14} = 1\frac{5}{14}$$

$$(17) \frac{5}{6} + \frac{4}{5} = \frac{25}{30} + \frac{24}{30} = \frac{49}{30} = 1\frac{19}{30}$$

$$(8) \frac{3}{5} + \frac{3}{4} = \frac{12}{20} + \frac{15}{20} = \frac{27}{20} = 1\frac{7}{20}$$

$$(18) \frac{13}{8} + \frac{2}{3} = \frac{39}{24} + \frac{16}{24} = \frac{55}{24} = 2\frac{7}{24}$$

$$(9) \frac{2}{3} + \frac{2}{5} = \frac{10}{15} + \frac{6}{15} = \frac{16}{15} = 1\frac{1}{15}$$

$$(19) \frac{9}{4} + \frac{3}{2} = \frac{9}{4} + \frac{6}{4} = \frac{15}{4} = 3\frac{3}{4}$$

$$(10) \frac{4}{7} + \frac{2}{3} = \frac{12}{21} + \frac{14}{21} = \frac{26}{21} = 1\frac{5}{21}$$

$$(20) \frac{11}{6} + \frac{1}{4} = \frac{22}{12} + \frac{3}{12} = \frac{25}{12} = 2\frac{1}{12}$$
